<b>99.96%</b> AVG UPTIME	<b>3</b> SITES MONITORED	<b>1</b> INCIDENTS	<b>2</b> ISSUES TO FIX
-----------------------------	-----------------------------	-----------------------	---------------------------

## Monitored sites

SITE	UPTIME	SSL	DNS	EMAIL	HEADERS	RISK
<b>Acme Corp — Marketing site</b> https://acmecorp.example	99.98%	up	up	warning	up	88
<b>Acme Corp — Blog</b> https://blog.acmecorp.example	99.91%	warning	up	up	warning	76
<b>Acme Corp — Store</b> https://store.acmecorp.example	100.0%	up	up	up	up	94

## Incident timeline

SITE	TYPE	STARTED	DURATION	SUMMARY
Acme Corp — Blog	uptime_http	May 24, 2026 07:20	12m	Brief outage (HTTP 503)

## Recommended actions

- Add a DMARC record to acmecorp.example to prevent email spoofing.
- Renew the SSL certificate for blog.acmecorp.example — it expires in 24 days.

→ Add Content-Security-Policy and HSTS headers to the blog.

## How this report is scored

---

The 0–100 risk score combines five checks per site: uptime (25), SSL certificate (20), email security / SPF & DMARC (20), security headers (20) and DNS (15). 90–100 Excellent · 75–89 Good · 50–74 Needs attention · 25–49 High risk · 0–24 Critical. All checks are passive and read-only.
